### Easy to Design · Easy to Setup

With a laser from Epilog, there's no difficult programming involved. It's truly as simple as printing to a piece of paper. Using your favorite graphic software (CorelDRAW, Adobe, AutoCAD, etc.), import your image, create your text and print your file to the laser. That's all there is to it!

And to make project setup even more convenient, our laser systems feature the **easiest project positioning features**, including Center/Center Engraving and our popular Moveable Home Positioning.

### The Advantages of Laser Engraving Wood

Etch images with resolutions of up to 1200 dots per inch. The laser's incredible accuracy is a result of the machine's high-quality mechanics and a highly-focused laser beam. The two combine to allow you to engrave any image into wood, or even acrylic, plastic, marble, and much more.

From surface engraving to deep etching, you can achieve a number of results with your Epilog laser by simply adjusting the speed and power settings in the Laser Dashboard print driver.

### The Advantages of Laser Cutting Wood

The laser creates a precise beam of light that is used to cut through woods of varying thicknesses - from ultra-thin veneer to hardwoods over 1/2" thick, depending on the wattage of the laser. But even our entry-level 30-watt laser will cut cleanly through wood up to 1/4" (6.35 mm) thick in a single pass.

Because the laser is computer controlled, you can easily cut intricate patterns in wood by simply importing a vector graphic and printing it to the laser.

MADE IN USA

### A Full Product Line to Meet Your Needs

At Epilog, we design a range of laser systems to meet varying needs. From the entry-level 16" x 12" (406 x 305 mm) Epilog Zing 16 to the top-of-the-line 36" x 24" (914 x 610 mm) Legend 36EXT, we proudly design, develop and manufacture all of our laser systems in Golden, CO.

Let us show you how easy it is to get started with an Epilog laser! To set up a hands-on demonstration of the laser in action, contact us today at +1 303-277-1188.
