

Legend elite series features
highest-quality laser engraving
(the feature that means the most to you and your business)

Quality is the Biggest Bell & Whistle Out There

Center-Center Engraving? We've got it. Moveable Home Position? That one too. Online training? Yep. Competitive Pricing? Definitely. We've got all of the features you could want, but when you're purchasing an expensive piece of equipment that you rely on to produce income for your business, it's the fundamentals that make the difference - image quality, speed, ease-of-use, and reliability. If you think about it, fundamentals are the biggest bells & whistles out there - and Epilog's strongest focus.

The Aztec Calendar - The Highest Standard of Engraving

If you've ever received an Epilog brochure in the mail you've probably been wowed by our Aztec Calendar. For years we've been including them in our brochures and producing them at trade shows for the simple reason that it shows the extraordinary detail *a standard production Epilog Laser system can produce, day-in and day-out.*

Many have tried to emulate our sample, but they have to enlarge it or use expensive, high-resolution optics packages to even approach the quality produced by our standard systems with our standard optics package. The speed, depth, darkness, and quality of engraving on such an intricate and delicate image has not been matched. Honestly, we're flattered that everyone tries to match this high level of engraving that has always been a hallmark for Epilog.

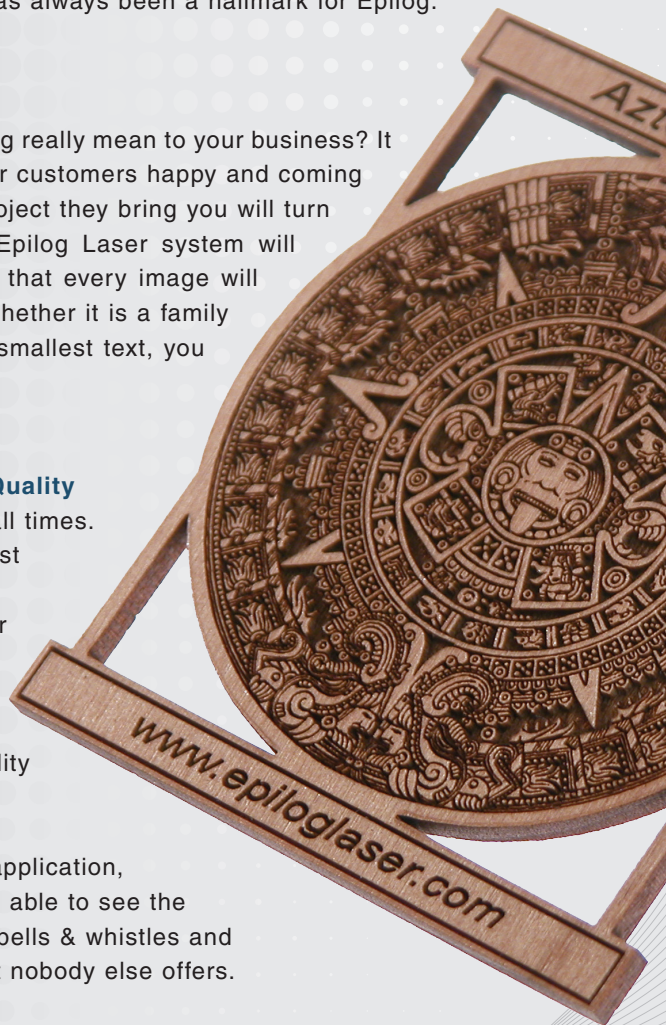

An Investment in Quality

What difference does this higher-quality engraving really mean to your business? It all comes down to your bottom line. To keep your customers happy and coming back, they need to know that each and every project they bring you will turn out with stunning results. Year after year, an Epilog Laser system will provide you with the peace of mind of knowing that every image will be produced with the highest possible quality. Whether it is a family photograph, company logo, clipart, or even the smallest text, you know your business can bank on your Epilog.

Features Working Together to Create Epilog Quality

- Waveguide laser tubes with quicker rise/fall times.
- High-Speed Servo Motors for incredibly fast acceleration and deceleration.
- Linear Encoders for the most precise laser positioning.
- NeverWear™ Stainless Steel Bearings for accuracy, repeatability and longevity.
- Radiance™ Optics for optimum beam quality over the entire work surface.

When you're looking for the right laser for your application, take a close look at the entire package. You'll be able to see the difference an Epilog Laser makes. Between our bells & whistles and incredible quality, it's a winning combination that nobody else offers.
