

# Adjustable Brush Foot Dust/Chip Extractor

## Description

The Adjustable Brush Foot provides an effective solution for the removal of dust and chips. With over-height industrial brushes, the adjustable brush foot is well suited to a wide range of material and job cutting types.

The brush foot is mounted independently of the spindle and therefore allows for easy tool bit changes. Each brush foot is shipped with hose adapters to accommodate hoses from 2 ½" to 4" diameter.

Available for both Elte and Colombo spindles.

The Adjustable Brush Foot remains stationary as adjusted, while the spindle moves up and down.
